Modification Log

1. 2026-09-07T13:26:30.458Z - agent - create_pipeline

Agent executed pipeline operation 'create_pipeline'.

User query: Design a pipeline that models the Trondheim Kommune compliance flow. Pipeline requirements: - Source node: tk_request_intake - Task node: validate_request (check structure, metadata completeness) - Task node: retrieve_relevant_data (find datasets needed for the request) - Task node: process_data_for_compliance (prepare data for legal checks) - Task node: run_compliance_checks (sector law, DPIA, obligations) - Task node: prepare_sharing_decision (YES/NO decision support) - Destination node: tk_decision_output Connect nodes in a linear sequence. Keep the pipeline minimal and aligned with the compliance flow in the diagram.

query_type: create_pipeline; **session_id:** 31d2bffe-c372-4dc6-bc22-4fc2068bc8b9

2. 2026-09-07T13:26:38.114Z - agent - create_step

Agent executed pipeline operation 'create_step'.

User query: Design a pipeline that models the Trondheim Kommune compliance flow. Pipeline requirements: - Source node: tk_request_intake - Task node: validate_request (check structure, metadata completeness) - Task node: retrieve_relevant_data (find datasets needed for the request) - Task node: process_data_for_compliance (prepare data for legal checks) - Task node: run_compliance_checks (sector law, DPIA, obligations) - Task node: prepare_sharing_decision (YES/NO decision support) - Destination node: tk_decision_output Connect nodes in a linear sequence. Keep the pipeline minimal and aligned with the compliance flow in the diagram.
